The time period for reply, if any, is set in the attached communication.

## Office Action Summary

Application No.

10/812,894

Applicant(s)

TANG ET AL.

Examiner

TRONG PHAN

Art Unit

2827

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 12 September 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-4, 6-20, 24-26, 29, 30 and 33-37 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-4, 6-20, 24-26, 29, 30 and 33-37 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

- ☐ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_
- ☐ Notice of Informal Patent Application (PTO-152)
- ☐ Other: \_\_\_\_\_

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-4, 6-20, 24-26, 29-30 and 33-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Matsumura et al., 5,365,475, in view of Sano et al., 4,901,285 and De et al., 6,593,799.

Matsumura et al., 5,365,475, in Fig. 3 a static random access memory (SRAM) device (2) which can be usable as in SRAM mode/ACTIVE mode and as in ROM (two-phase ROM) storing any data (see lines 11-13, column 4) while read-only memory cell fixedly storing any data not being read (see lines 46-52, column 4) comprising:

#### **Regarding claims 1 and 30:**

a first transistor pair (transistors 21 and 23) coupled between a supply voltage line (27) and GROUND (28);

a second transistor pair (transistors 22 and 24) coupled between the supply voltage line (27/28) and GROUND (G1/G2), the supply voltage line to receive a first supply voltage (V1) based on a first mode (SRAM mode/ACTIVE mode) of the memory device and to

receive a second supply voltage (V2) based on a second mode (ROM mode storing any data) of the memory device, the second supply voltage (V2) being different than the first supply voltage (V1) (**see Figs. 8A-D**);

a first access transistor (transistor 25) coupled to a word line (WL), a first bit line (BL) and a common node (NA) of the second transistor pair (transistors 22 and 24);

a second access transistor (transistor 26) coupled to the word line (WL), a second bit line (BL) and a common node (NB) of the first transistor pair (transistors 21 and 23);

**Regarding claim 8:**

the one transistor of the first transistor pair (transistors 21 and 23) comprises a PMOS transistor (PMOS transistor 21) and the one transistor of the second transistor pair (transistors 22 and 24) comprises another PMOS transistor (PMOS transistor 22);

**Regarding claim 9:**

A static random access memory (SRAM) device (2) comprising:

a first SRAM memory cell having a cross-coupled inverter configuration, the cross-coupled inverter configuration including at least four transistors (transistors 21, 23, 22 and 24);

a supply voltage line to provide a first supply voltage (V1) to two transistors (transistors 21 and 22) of the at least four transistors (transistors 21, 23, 22 and 24) of the first SRAM memory cell based on a first mode (SRAM mode/ACTIVE mode) of the first SRAM memory cell and to provide a second supply voltage (V2) to the two transistors (transistors 21 and 22) based on a second mode (ROM mode storing any data) of the

first SRAM memory cell, the second supply voltage (V2) being different than the first supply voltage (V1) (see Figs. 8A-D);

**Regarding claims 10, 24 and 33:**

a power control unit (program unit 27) to change the supply voltage on the supply voltage line based on either the first mode or the second mode of the first SRAM memory cell;

**Regarding claim 11:**

the power control unit (program unit 27) further to control switching of the switching device based on either the first mode or the second mode of the first SRAM memory cell;

**Regarding claim 16:**

further comprising a second SRAM memory cell having a cross-coupled inverter configuration, the cross-coupled inverter configuration of the second SRAM memory cell including at least four transistors, the supply voltage line to provide a supply voltage to two transistors of the at least four transistors of the second SRAM memory cell based on a mode of the second SRAM memory cell (a plurality of SRAM cells 2 in Fig. 2A);

**Regarding claim 18:**

An electronic system comprising:

a processor device to process data (micro processor 104 in Fig. 15);

a static random access memory (SRAM) device (SRAM cell 2) to store the data;

and a power control unit (program unit 27) to control a supply voltage level

(V1 and V2) applied to the SRAM device and to provide a signal indicative of

a mode of the SRAM device, the power control unit (program unit 27) to apply a first voltage level (V1) in a first mode (SRAM mode/ACTIVE mode) and to apply a second voltage level (V2) in a second mode (ROM mode storing any data) (see Figs. 8A-D);

**Regarding claim 35:**

the first supply voltage V1) and the second supply voltage (V2) are applied to a source of the one transistor (transistor 21) of the first transistor pair (transistors 21 and 23) and to a source of the one transistor (transistor 22) of the second transistor pair (transistors 22 and 24);

**Regarding claim 36:**

the supply voltage line (27) to provide the first supply voltage (V1) and the second supply voltage (V2) to sources of the two transistors (transistors 21 and 22) of the at least four transistors (transistors 21, 23, 22 and 24) of the first SRAM memory cell 2);

**Regarding claim 37:**

the power control unit (program unit 27) to apply the first voltage level (V1) and the second voltage level (V2) to sources of transistors (transistors 21 and 22) within the SRAM device (2).

Matsumura et al., 5,365,475, discloses everything except the STANDBY mode recited in claims 1, 4, 6-7, 9-11, 14-15, 18, 24-26, 29-30 and 33-34.

Sano et al., 4,901,285, discloses in Figs. 1A and 1B the teaching that "during operation of ROM 10 while not being read (standby mode)" (see lines 36-37, column 4).

Therefore, in view of the above teaching of Sano et al., 4,901,285, the operation in which ROM (two-phase ROM) storing any data (see lines 11-13, column 4) while read-only memory cell fixedly storing any data not being read (see lines 46-52, column 4) would have been obviously a STANDBY mode recited in claims 1, 4, 6-7, 9-11, 14-15, 18, 24-26, 29-30 and 33-34.

Matsumura et al., 5,365,475, which is modified by Sano et al., 4,901,285, disclose everything except the bias transistor comprising an NMOS coupled to a body of one of transistor of the first transistor pair and to a body of one of transistor of the second transistor pair, having a source coupled to GROUND to apply a forward body bias to the one of transistor of the first transistor pair and to the one of transistor of the second transistor pair based on a STANDBY signal recited in respective claims 2-4, 6-7, 12-15, 17, 19-20, 25-26, 29 and 34.

De et al., 6,593,799, discloses in Fig. 7 the teaching of using NMOS transistor 352 coupled between the bodies of PMOS transistors 340 and 342 and GROUND Vss to apply a forward body bias to each of PMOS transistors 340 and 342 in response to output of logic low voltage of control circuitry 516 in standby mode (see lines 2-6, column 2; lines 15-17 and 32-34, column 6) in a static memory SRAM device (see lines 29-30, column 1).

It would have been obvious under 35 USC 103(a) to one of ordinary skill in the art at the time of the invention was made to utilize the NMOS transistor 352 in Fig. 7 of De et al., 6,593,799, for providing a forward body bias to each of PMOS transistors 21 and 22 in Fig. 3 of Matsumura et al., 5,365,475, which is modified by

Sano et al., 4,901,285, for the purpose of obtaining high performance/high power or moderate performance/low power (see lines 55-58, column 10 of De et al., 6,593,799) and increasing static noise margin (claim 20) (see lines 9-11, column 8 of De et al., 6,593,799).

### ***Conclusion***

3. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

### ***Response to Arguments***

4. Applicant's arguments filed on 9/12/07 have been fully considered but they are not persuasive because of the following reasons:

Matsumura et al., 5,365,475, does teach in Fig. 3 the supply voltage line to

receive a first supply voltage (V1) based on a first mode (SRAM mode/ACTIVE mode) of the memory device **and to receive a second supply voltage (V2) based on a second mode (ROM mode storing any data) of the memory device, the second supply voltage (V2) being different than the first supply voltage (V1) (see Figs. 8A-D).** Therefore, the rejection of claims 1-4, 6-20, 24-26, 29-30 and 33-37 under 35 USC 103(a) as being unpatentable over Matsumura et al., 5,365,475, which is modified by Sano et al., 4,901,285, and De et al., 6,593,799, set forth as above is totally proper.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to TRONG PHAN whose telephone number is (571) 272-1794. The examiner can normally be reached on M-F (8:30-5:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, AMIR ZARABIAN can be reached on (571) 272-1852. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a
